Abstract (Basic): US 20020083117 A1

NOVELTY - A dispatcher receives data requests from the clients and

assigns **priority** including **dynamic** and static **priority** components, to each of the data requests. The received data requests is

transmitted to a back-end server, corresponding to assigned priorities,

for processing the received data requests.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included
for the
following:

- (1) Data requests processing method; and
- (2) Computer readable medium storing data requests
processing
program.

USE - Computer server for network applications like e -
mail ,
file transfer, audio/video streaming.

ADVANTAGE - Appropriate quality-of-service assurance is
provided to
higher priority requests in time, without starving low
priority
requests.

DESCRIPTION OF DRAWING(S) - The figure shows a flowchart
illustrating the data requests processing method.

Abstract (Basic): US 20030140309 A1

NOVELTY - An extraction unit extracts a characteristic
word from

existing topics and keyword input by user. A processor
calculates

weight of the extracted words and **modifies weight** of the
characteristic word based on specific conditions. An
acquisition unit

acquires information related to existing topics based on
modified

weight of characteristic word, from which information
related to the

keyword is searched and displayed.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also
included for the

following:

- (1) information processing method;
- (2) information processing program; and
- (3) storage medium storing computer readable information
processing
program.

USE - For processing information related to documents of

electronic mail .

ADVANTAGE - Provides information related to the documents classified under the topics being handled by the user and reflects the

user's degree of interest.

DESCRIPTION OF DRAWING(S) - The figure shows a flowchart explaining

the information processing method.

Patent Details:
Patent No Kind Lan Pg Main IPC Filing Notes
US 6654787 B1 18 G06F-015/16

Abstract (Basic): US 6654787 B1
NOVELTY - The method involves receiving a request to retrieve e - mail messages from a mail server on behalf of a client. A module (850) filters the messages based on rules to produce filtered messages. The rules are established utilizing sample email messages retrieved from created e - mail probes. The filtered messages are transferred to the client and storing the non-transferred messages in a memory on the server.

DETAILED DESCRIPTION - AN INDEPENDENT CLAIM is also included for an e - mail filter.

USE - Used for filtering an e - mail message over the Internet.

ADVANTAGE - The method dynamically updates e - mail filter

technology to meet the threat posed by ever-changing varieties of spam

. The method can be applied without the need to upgrade
computer
systems and networks and can be easily implemented by a user.
DESCRIPTION OF DRAWING(S) - The drawing shows an e -

mail

filtering method with two or more user accounts established
on a server

or a proxy server.

AU 9941617 A G06F-017/60 Based on patent WO 9964972

Abstract (Basic): WO 9964972 A2

NOVELTY - The category set (24) associated with one
recipient is

provided to the sender after identification of the recipient.
Default

priority level is set for categories in the category set. One
of the

category (26) is selected from the category set for
association with

e-mail message. The e-mail message is transmitted together
with the

selected category to the recipient.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also
included for the

following:

- (a) electronic mail prioritization system;
- (b) computer program for sorting mail, for processing
electronic

communication and for **increasing** user base

USE - For **prioritizing electronic mail** in internet based

electronic mail management system.

ADVANTAGE - Sender is enabled to select one or more entries in

predefined area to allow automatic sorting of e-mail messages in

receiver's computer. The user can specify some of topic areas in

predefined area as password protected area so that only senders having

appropriate password can designated the protected entry. The **electronic mail prioritizing** technique can be

implemented in

computer hardware, software or any suitable combination using conventional techniques.

DESCRIPTION OF DRAWING(S) - The figure shows simplified pictorial

illustration of **e - mail prioritization** system.

JP 2990125	B2		7	G06F-013/00	Previous Publ. patent JP 11102331

Abstract (Basic): JP 11102331 A

NOVELTY - After e-mail perusal, the degree of e-mail importance,
which is decided and informed to the list address register, is recorded
in the server side system (1). During the mail perusal at client side
system (2), the degree of e-mail importance is acquired from the server
side system and displayed. DETAILED DESCRIPTION - An
INDEPENDENT CLAIM
is also included for describing electronic mail system in computer
system.

USE - For displaying importance e - mail message
significance
based **priority** in computer network.

ADVANTAGE - Since the degree of e-mail importance is decided and
transmitted to the list address register, work efficiency is increased

. Since the mail with high degree of importance is perused timely, mail
perusal process time is reduced. DESCRIPTION OF DRAWING(S) -
The figure

depicts the block diagram of importance degree display method
of

e-mail. (1) Server side system; (2) Client side system.

FILED: August 06, 2002 (20020806)
INTL CLASS: G06F-013/00

ABSTRACT

PROBLEM TO BE SOLVED: To provide a sorting filter updating method which filters an **electronic mail** using a new category area by preparing a new sorting filter or updating the information of the existing sorting filter according to the **change** of inclination of information such as character strings included in a received **electronic mail**, and also to provide a system therefor, a sorting filter updating program and a recording medium in which the program is recorded.

SOLUTION: A computer decomposes the text of an **electronic mail** to be filtered into character strings, and defines character strings which are not overlapped with character strings for featuring the existing sorting filter as a new category block, and extracts an **electronic mail** including the new category, and executes the preparation of a new category filter or the information update of the existing sorting filter by using a character string extracted the predetermined number of times or more among character strings included in the **electronic mail** as a

keyword.

Abstract (Basic): WO 200471035 A1

NOVELTY - The summary of the electronic messages that are not

categorized as wanted or unwanted message is transmitted to the client.

The messages are handled according to the feedback from client.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) system for filtering and delivery of **electronic message** ;
and
(2) software product for **electronic message** filtering and delivery.

USE - For **dynamic** server-based **filtering** and delivery of **electronic messages** like **electronic mail** to portable client

terminal like wireless-enabled personal digital assistant (PDA), cell phone, portable computer and other devices, over internet.

ADVANTAGE - Improves **electronic message** delivery.
Reduces the amount of data to be transmitted to the clients and hence uses lesser bandwidth which reduces the expense for delivery of unwanted messages.

Since messages are filtered at the server side, time and effort at the client side are conserved.

DESCRIPTION OF DRAWING(S) - The figure shows a flowchart illustrating the feedback received by the server and the actions taken by the server according to the feedback.

Mail evaluation device for use in enterprises in homes, has
keyword

information table which records the keyword information
corresponding to

points allotted according to the ranking of e - mails

Patent Assignee: FUJITSU LTD (FUIT)

JP 2001331422 A 15 G06F-013/00

Abstract (Basic): JP 2001331422 A

NOVELTY - A ranking unit ranks the received e - mail
based on

the total reference time and number of characters in the e-
mail. A

keyword information table (8) records the keywords
corresponding to the

points allotted according to the ranking of the e - mails
. An

updating unit updates the information in the table based on
e - mail

ranking and evaluation unit evaluates the mail content,
based on the

updated keyword information in the table.

USE - Used in the enterprises and homes, for evaluating
received
mails.

ADVANTAGE - An essential mail is easily recognized from a
group of

received mails. Since the mails are displayed according to
predetermined priority, the efficiency of enterprise activity
is

increased .

DESCRIPTION OF DRAWING(S) - The figure shows the block
diagram of

mail priority judging device. (Drawing includes non-English
language
text).

Keyword information table (8)

File management method in distributed e - mail system,
involves

filtering files such as spams that are found to meet
criteria of

filtering information and updating filtering information
according to

unfiltered file processing result

Patent Assignee: INT BUSINESS MACHINES CORP (IBMC)
Inventor: CHESSE D M; KEPHART J O; MORAR J F; PRING E J; WHITE S R

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 6772346	B1		14	G06F-011/30	

Abstract (Basic): US 6772346 B1

NOVELTY - The files such as spams transmitted by an
originating

node, that are found to meet criteria of filtering
information, are

filtered and filtered results are transmitted to originating
node. The

unfiltered files are queued for processing at analysis center
node and

filtering information is updated in accordance with results
of

automatic processing performed by the node.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also
included for

system for managing transmission of file from node to node in
distributed network.

USE - For managing transmission of file and query between
nodes

such as server, workstation, desktop computer, laptop,
pervasive

system, in network-connected distributed system such as
distributed

e-mail system, anti-virus system, distributed satellite data
analyzing

system and integrals computing system.

ADVANTAGE - **Increases** the efficiency of the distributed system

and reduces congestion, by using the results of processing at one node

to update the data used in processing at the other nodes in future.

DESCRIPTION OF DRAWING(S) - DESCRIPTION OF DRAWING - The figure

shows a flow diagram explaining the file management method.
